JOIN A SCIENTIFIC CRUISE IN THE TROPICAL ATLANTIC

We are looking for volunteers to take part in an oceanographic research cruise in the tropical Atlantic on board of R/V Meteor!

24th May – 29th June 2018
Belem, Brazil – Walvis Bay, Namibia

As a participant in this cruise, you will be involved in research on the tropical Atlantic meridional overturning circulation and upwelling processes off the Angolan coast, utilizing cutting edge ocean observatories and instrumentation.

The working program includes a transatlantic section along 11°S (hydrography, velocity, nutrients, tracer etc.), mooring work off Angola, a 4-day upwelling process study with gliders and microstructure, crossing the Angola Benguela Front, the deployment of Argo floats, continuous O₂ and N₂O measurements, and much more.

You will experience ‘real’ ocean data acquisition and life on board a research vessel, join lectures and seminars on related topics with students and scientists, improve your Matlab skills, and get free board and meals.

If you are interested to participate in the cruise, please send a brief motivation letter to
